ASSURANCE STATEMENTS	
1.)	Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
2.)	Each principal investigator has considered alternatives to painful procedures.
3.)	This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
4.)	The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Annual Research Facilities Report animal use protocols, FY 2013

PINNIPEDS used as research animals

Northern fur seals (*Callorhinus ursinus*) (Protocols 1-4)

Category C.

Protocol # 1

Location: St. Paul Island, AK

Pups

740 animals

Capture by hand, physically restrain, weigh, insert flipper tags in fore-flippers¹, and release at site of capture.

Location: St. George Island, AK

Pups

1,158 animals

Capture by hand, physically restrain, weigh, insert flipper tags in fore-flippers¹, and release at site of capture.

Protocol # 2

Location: St. Paul Island, AK;

Juvenile and/or Adult

35 animals

28 animals, Capture with noose, physically restrain, weigh, insert flipper tags in fore-flippers¹, blood sample, nasal swab, and release at site of capture.

6 animals, Capture with noose, physically restrain, weigh, insert flipper tags in fore-flippers¹, and release at site of capture.

1 animal, Capture with noose, physically restrain, weigh, and release at site of capture.

Location: St. George Island, AK

Juvenile and/or Adult

72 animals

2 animals, Capture by hand, physically restrain, weigh, insert flipper tags in fore-flippers¹, and release at site of capture

3 animals, Capture with noose, physically restrain, weigh, insert flipper tags in fore-flippers¹, and release at site of capture

1 animal, Capture with noose, physically restrain, weigh, and release at site of capture.

66 animals, Capture with net, physically restrain, weigh, and release at site of capture.

9/1 F 0001

Protocol # 3

Location: San Miguel Island, CA

Pups

123 Animals

92 animals, Capture with net, physically restrain, measure, weigh, insert flipper tags in fore-flippers¹, and release at site of capture.

31 animals, Capture with net, physically restrain, measure, weigh, insert flipper tags in fore-flippers¹, blood sample, and release at site of capture.

Protocol # 4

Location: St. Paul Island, AK

Juvenile and/or Adult

7 animals

2 animals, Capture with net, physically restrain, weigh, insert flipper tags in fore-flippers¹, blood sample, nasal swab, attach instrument (satellite tag), and release at site of capture.

4 animals, Capture with net, physically restrain, weigh, insert flipper tags in fore-flippers¹, blood sample, attach instrument (satellite tag), and release at site of capture

1 animal, Capture with net, physically restrain, weigh, attach instruments (satellite tag and VHF tag), release at site of capture, recapture, remove instruments, blood sample, and release at site of capture.

California sea lions (*Zalophus californianus*) (Protocols 5 -14)

Category C

Protocol # 5

Location: San Miguel Island, California

Age class: pup

Animals: 180 (# of animals sampled if other than total for protocol)

Capture by net, restrain, measure, weigh, flipper tag¹, retain skin sample from tagging, nasal swab (21), rectal swab (21), clip fur (11), clip whisker (11), blood sample (19) release at site of capture.

Protocol # 6

Location: San Miguel Island, California

Age class: pup

Animals: 21 (# animals sampled if other than total for protocol)

071 f 0001

Capture by net, restrain, measure, weigh, flipper tag, retain skin sample from tagging, nasal swab, rectal swab, blood sample (19), clip fur, (10), clip whisker (10) release at site of capture.

Protocol # 7

Location: San Miguel Island, California

Age class: pup

Animals: 84 (# animals sampled if other than total for protocol)

Capture by net, restrain, measure, weigh, blood sample (79), nasal swab (43), rectal swab (43) release at site of capture.

Protocol # 8

Location: San Nicolas Island, California

Age class: pup

Animals: 25 (# animals sampled if other than total for protocol)

Capture by net, restrain, nasal swab (20), rectal swab (20), blood sample (16), clip whisker (5) release at site of capture.

Category D

Protocol # 9

Location: San Miguel Island, California

Age class: pup

Animals: 267

Capture by net, restrain, measure, weigh, gas anesthesia, flipper tag, hot brand, retain skin sample from tagging, release at site of capture.

Protocol # 10

Location: San Miguel Island, California

Age class: pup

Animals: 33 (# animals sampled if other than total for protocol)

Capture by net, restrain, measure, weigh, gas anesthesia, flipper tag, hot brand, retain skin sample from tagging, blood sample (32), nasal swab (22), rectal swab (22) clip whisker (11); release at site of capture.

Protocol # 11

Location: San Miguel Island, California

Age class: Juvenile

Animal: 1

91 F 0001

Capture by net, restrain, measure, weigh, gas anesthesia, flipper tag, hot brand, retain skin sample from tagging, release at site of capture.

Protocol # 12

Location: San Miguel Island, California

Age class: juvenile

Animals: 23 (# animals sampled if other than total for protocol)

Description: Capture by net, restrain, measure, weigh, gas anesthesia, flipper tag, blood sample, urine sample by catheter, nasal swab (4), rectal swab (4), release at site of capture.

Protocol # 13

Location: San Miguel Island, California

Age class: Adult female

Animals: 4 (# animals sampled if other than total for protocol)

Capture by net, restrain, measure, weigh, gas anesthesia, blood sample, urine sample (3), release at site of capture.

Protocol # 14

Location: San Miguel Island, California

Age class: Adult female

Animals: 24 (# animals sampled if other than total for protocol)

Description: Capture by net, restrain, measure, weigh, injectable sedation, blood sample, nasal swab, rectal swab, clip fur (13), clip whisker (13), attach instrument to pelage (13), remove instrument from pelage (11) release at site of capture.

Steller sea lions (*Eumetopias jubatus*) (Protocols 15 – 18)

Category D

Protocol # 15

Location: Aleutian Islands, Alaska,

Adult females

5 animals (# animals sampled if other than total for protocol)

Capture by injectable immobilizing agent; anesthesia with, gas w/cone and intubation; weigh; measure hot brand; administer drug, IV and subcutaneous, photo-id; samples: skin biopsy, blood; blubber biopsy (4); milk; vibrissae (pull), hair; fecal swab, swab all mucous membranes; instrument, external; bioelectrical impedance (subcutaneous) (4); ultrasound

9,80001

Protocol # 16

Location: Aleutian Islands, Alaska,

Pups

110 animals (# animals sampled if other than total for protocol)

Capture/restrain by hand and/or net; weigh; anesthesia gas w/cone or mask; weigh; mark, hot brand; measure; photo-id; samples: swab all mucus membranes, skin biopsy, hair, and blood (38).

Protocol # 17

Location: Rogue Reef, Oregon,

Pups

150 animals (# animals sampled if other than total for protocol)

Capture by net, restrain, measure, weigh, gas anesthesia, flipper tag (41 animals), hot brand, rectal swab (34 animals), nasal swab (34 animals), lesion biopsy (10 animals), release at site of capture.

Protocol # 18

Location: Columbia River, Oregon

Adult Male

2 animals

Capture in floating trap, restrain, weigh, gas anesthesia, hot brand, attach Crittercam video camera, release at site of capture.

CETACEANS used as research animals

Category C

Gray whale (*Eschrichtius robustus*)

Protocol #19

Location: Approx. 80km southeast of Point Hope, AK, Chukchi Sea

5 Animals

Satellite transmitters were attached to the body of the whales using an Air Rocket Transmitter System (ARTS), which is a modified marine safety pneumatic line thrower. Whales were tagged with the implantable configuration of the SPOT 5 and MK-10a transmitters produced by Wildlife Computers (Redmond, WA). These instruments are cylindrical in shape and contain an ARGOS satellite PTT. When deployed, approximately 4 cm of the tag remains external to the body of the whale, with an antenna extending from the distal end of the tag. All tagged gray whales were large adults, and none were associated with a calf.

91 of 0001

Humpback whale (*Megaptera novaeangliae*) (Protocols 19-20)

Protocol #20

Location: Gulf of Maine, MA,

8 Animals

Eight humpback whales were tagged with location-only implantable satellite tags in the Gulf of Maine in July-August 2013 to evaluate physical and physiological impacts of these types of tags on humpback whales. The tags persisted on the animals for a median period of 48.8 days (76 days maximum). Focal follows of tagged animals were conducted for up to one hour after tagging and routine follow-ups were performed to evaluate the condition of the individual across the tagging period. Some tagged animals exhibited more pronounced or extended reactions to the procedure than others on the day of tagging, although they all returned to normal behavior in less than one hour. The specific cause of more extended reactions is difficult to determine, but it is conceivable that pain was involved. Swelling occurred at the tag site in some cases, likely a tissue reaction to the presence of a foreign body. In total, 3 of the 8 animals exhibited more extended behavioral reactions or significant tag site swelling. Given the difficulty in assessing pain in free-ranging large whales, these are listed under Category E as a precaution. No intervention was performed because techniques do not yet exist for the routine treatment of pain in free-ranging large whales at sea. However, we expect that the results of our study will contribute to reducing future physical and physiological effects on tagged individuals.

Protocol 21

Location: Gulf of Maine, MA,

10 Animals

Ten Gulf of Maine humpback whales were tagged with LIMPET (Low-impact minimally invasive percutaneous electronic tag, n=5) and a modified pole-deployed version of the Wildlife Computers SPOT-299C tags (n=5) in July-August 2013. The goal of this study was to assess the feasibility of using these types of instruments on humpback whales. Focal animal follows were conducted as described above. No animals showed behavior that indicated more than minor or temporary pain after tag deployment. Median and average durations for LIMPET and SPOT-299C tags were, respectively, 8.1 and 7.6, and 13.4 and 9.0 days. Only one individual was confirmed to retain a portion of the tag after transmission failure, and that attachment barb is in the process of being shed. A biopsy sample was obtained from one of the tagged whales (on a subsequent day) and only an immediate behavioral disturbance was observed.

¹ Flipper tagging is done without anesthesia or analgesic because the process of tagging is very quick, does not appear to cause more than momentary or slight pain. There is no evidence that the presence of the tag following application causes any pain or distress to the animal. Flipper tagging is therefore a procedure appropriate for Category C.

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. A Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 91-R-0002

2. Number 3 of animals used in this study.

3. Species (common name) Rocky Mt. Bighorn Sheep of animals used in the study.

4. Explain the procedures producing pain and/or distress.

This project utilized 3 bighorn sheep to study the natural disease transmission of pneumonia. Bighorn sheep which had survived a pneumonia outbreak were comingled with naive bighorn sheep. The naive comingled bighorn sheep have the potential of developing pneumonia. The pain/distress is due to the development of pneumonia. Clinical signs of pneumonia in bighorn sheep include anorexia, depression, lethargy, abnormal body temperature, coughing, dyspnoea, ocular and/or nasal discharge.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results.
(For Federally mandated testing, see Item 6 below)

In this study, the development of pneumonia (or lack thereof) is essential to this research and therefore precludes the use of antibiotics. This study involves bighorn sheep and the non-domesticated nature of the animals presents a complication in early detection of pneumonia. Since the bighorn are wild animals, it can be very difficult to capture them in order for a veterinarian to perform a physical exam. While handling facilities are in place to ease this process, capture episodes still have a real possibility of inducing stress, traumatic injuries and/or capture myopathy. The addition of stress for regular capture sessions in order to monitor the sheep would introduce a confounding factor and likely change study results. Because of this, regular physical exams and drug administration for individual animals is not possible. Thus the animals are monitored from a distance to detect clinical signs of disease such as labored breathing or lethargy. Once clinical signs are noted, the animals are captured, examined by a veterinarian to confirm pneumonia, and then humanely euthanized in order to alleviate pain and distress. As a prey species, Bighorn sheep have evolved to hide signs of disease in order to prevent predation. Because of this, pneumonia is usually advanced before any clinical signs are detected. It is this time period (the onset of disease to developing notable clinical signs) that is the basis for the "E" classification. In humans, pneumonia is typically not a painful disease, especially during the early stages. However, because of the inability to monitor and treat individual animals early in the disease process as described above, and because of the potential for advanced pneumonia in the absence of observed disease, the IACUC elected to err on the side of caution and classify these as "E" protocols. +

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9CFR 113.102):

Column E Explanation

This form is intended as an aid to completing the Column E explanation. It is not an official form and its use is voluntary. Names, addresses, protocols, veterinary care programs, and the like, are not required as part of an explanation. Column E explanation must be written so as to be understood by lay persons as well as scientists.

1. Registration Number: 91-R-0011.

2. Number 36 of animals used in this study.

3. Species (common name) Guinea Pigs of animals used in the study.

4. Explain the procedure producing pain and/or distress.

Guinea Pigs are used for the performance of the Food and Drug Administration directed General Safety Test, as defined in 21 CFR Part 610.11. The animals are given an intraperitoneal injection (part 610.11, c, 1) of up to 5mL of a product that is generally regarded as safe and non-toxic. The overt health of the animal is monitored for a seven day period, at which time the test is concluded. A failed test is indicated by either death or weight loss of the animal. Product interaction may be attributed to either of these results.

5. Provide scientific justification why pain and/or distress could not be relieved. State methods or means used to determine that pain and/or distress relief would interfere with test results. (For Federally mandated testing, see item 6 below)

Anesthetics, analgesic or tranquilizing drugs are not administered, as they may interfere with the test results. The product may induce a pyrogenic response, potentially resulting in weight loss and/or death, which would be masked by these drugs. At any time during the test an animal that appears to be ill and/or suffering, it will be humanely euthanized.

6. What, if any, federal regulations require this procedure? Cite the agency, the code of Federal Regulations (CFR) title number and the specific section number (e.g., APHIS, 9 CFR 113.102):

Agency: DHHS-FDA, CBER CFR 21 CFR 610.11 General Safety

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

(b)(6), (b)(7)(c)

Summary of IACUC Approved **Exceptions** to the AWA:

1. Cage Sanitation for Nonhuman Primates During CDC Quarantine (SRC):

The Animal Welfare Act requires sanitation of the primary enclosure of nonhuman primates “at least once every 2 weeks and as often as necessary to prevent an excessive accumulation of dirt, debris, waste, food waste, excreta, or disease hazard.”¹

This variance would allow an extension from the AWA requirements for the first cage sanitation following receipt from a 14 day to 19 day maximum interval. If the first cage sanitation during quarantine is delayed for four days during the CDC mandated quarantine period, this will synchronize sanitation procedures with Tb testing, thus reducing the number of times the animals must be sedated.

During any period when the sanitation extension is in place, cages will be visually monitored by Husbandry personnel during standard daily room cleaning and any “grossly soiled” cages (e.g., excessive amounts of debris which may contain unacceptable concentrations of microorganisms or affect normal behavior) will be reported to Colony Manager/Supervisor or a Clinical Veterinarian. Then necessity of cage change will be discussed and determined by these personnel taking into consideration each animal’s condition and status.

This exemption is requested to reduce stress on the animals and to stabilize food consumption during the quarantine and stabilization period by reducing the number of times the animals must be sedated.

The total number of animals affected by this variance during the reporting year was 120.

2. Exception: Minimum Space Requirements for Group 1 and 2 Housing (SRC)

The Animal Welfare Act states “the minimum space that must be provided to *each* nonhuman primate, whether housed individually or with other nonhuman primates, will be determined by the typical weight of animals of its species.”² Nonhuman primates are divided into 6 groups by species and size. Group 1 is defined as “marmosets, tamarins, and infants (less than 6 months of age) of various species.” The table detailing minimum space requirements by group determines that animals falling into Group 1 must meet the following criteria for housing: Weight – under 2.2lbs or under 1kg; Floor area – 1.6 ft sq or 0.15 m sq; Height – 20” or 50.8 cm. Group 2 is defined as “capuchins, squirrel monkeys and similar size species, and juveniles (6 months to 3 years of age) of various species. Minimum housing requirements for Group 2 are: Weight – 2.2 – 6.6 lbs or 1 – 3 kg; Floor area – 3.0 ft sq or 0.28 m sq; Height – 30” or 76.2 cm.

An exception from the aforementioned regulations is requested to allow for the reduction of housing space for infants requiring incubation care. On occasion, it is necessary to place infants in incubators for clinical reasons, or for body temperature support following maternal rejection. In these cases, infants may be housed in incubators until they are able to thermoregulate and a suitable social partner is available.

¹ Animal Welfare Act Regulations, 9 CFR, Volume 1, Section 3.84, Paragraph (a)

² Code of Federal Regulations, Title 9, Chapter I, Part 3, Subpart D, Section 3.80 (b)

91R0053

Incubators do not meet the minimum requirements for Group 1 or Group 2 housing. This request is to waive the sizing requirements for the duration of incubation as determined by a veterinarian. Infants will be removed from incubation and placed in housing meeting or exceeding the minimum standards as set forth in the regulations when a veterinarian determines this change will be beneficial to the health and welfare of the infant.

The number of animals impacted by this variance during the reporting year was eleven.

Page 13

According to the Paperwork Reduction Act of 1995, an agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid OMB control number. The valid OMB control number for this information collection is 0579-0036. The time required to complete this information collection is estimated to average 2 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

(b)(7)(F)

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY (Attach additional sheets, if necessary, or use APHIS FORM 7023A.)

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery, or tests were conducted involving accompanying pain or distress to the animals and for which the use of appropriate anesthetic, analgesic, or tranquilizing drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. (An explanation of the procedures producing pain or distress on these animals and the reasons such drugs were not used must be attached to this report.)	F. TOTAL NUMBER OF ANIMALS (Cols. C + D + E)
4. Dogs	0	387	65	0	452
5. Cats	0	276	59	0	335
6. Guinea Pigs	0	4	0	0	4
7. Hamsters	0	4	0	0	4
8. Rabbits	0	13	0	0	13
9. Non-human Primates	0	0	0	0	0
10. Sheep	0	0	0	0	0
11. Pigs	0	0	0	0	0
12. Other Farm Animals	0	13	0	0	13
13. Other Animals	0	7	0	0	7

ASSURANCE STATEMENTS

- Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, teaching, testing, surgery, or experimentation were followed by this research facility.
- Each principal investigator has considered alternatives to painful procedures.
- This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- The attending veterinarian for this research facility has appropriate authority to ensure the provisions of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.
